1. Effects of Acute Accidental Exposure

Eye Contact:

Eye irritant.

Skin Contact:

Potential skin irritant.

Inhalation:

Not applicable.

Ingestion:

Slightly toxic.

2. Effects of Chronic Exposure

National Toxicology Program studies on diethanolamine itself and fatty acid condensates containing free diethanolamine (DEA) (lauramide and cocamide diethanolamines) indicated an increased incidence of kidney and/or liver tumors in mice dermally exposed for their lifetime. The significance of these findings and their potential relevance to humans are not clear and further studies are in progress. Diethanolamine or its condensates did not induce tumor in rats. In the interim, the US CIR, which had previously considered these materials as "safe as used", has expressed reservation over NTP's conclusions and saw no need to revise its conclusion until several outstanding questions on the NTP methodology are answered. For purposes of chronic exposure under the OSHA Hazard Communication Standard, these are untested mixtures. These products have been used extensively by consumers and Worldwide Beauty Care is not aware of any significant adverse effects. Target Organs: These products contain ingredients which have been shown to affect tissues or organs when fed at high levels of exposure in animal studies not encountered in normal use. Target Organs Identified in animal studies are as follows: Alcohol Denat.: Liver, eye, CNS, reproductive. Glycerin: Kidney, liver. Propylene Glycol: CNS.

3. Carcinogen Status:

OSHA: No NTP: Yes (DEAs) IARC: DEA is not Classifiable (Group 3)

4. Route of Entry:

Inhalation: No Ingestion: Yes Skin: Yes

5. Pre-existing dermatitis would likely be made worse by exposure to these products.

6. Emergency and First Aid Procedures
