Product name: Pyroil™ DIESEL FUEL TREATMENT
Product code: PYDFT5

2. HAZARDS IDENTIFICATION

**Emergency Overview**

Appearance: liquid

**WARNING!** COMBUSTIBLE LIQUID AND VAPOR. MAY AFFECT THE CENTRAL NERVOUS SYSTEM CAUSING DIZZINESS, HEADACHE OR NAUSEA. CAUSES EYE IRRITATION. MAY CAUSE SKIN AND RESPIRATORY TRACT IRRITATION. PROLONGED OR REPEATED CONTACT MAY DRY SKIN AND CAUSE DERMATITIS AND BURNS. HARMFUL IF INHALED.

**Potential Health Effects**

**Exposure routes**
- Inhalation, Skin absorption, Skin contact, Eye Contact, Ingestion

**Eye contact**
- Can cause severe eye irritation. Symptoms include stinging, tearing, redness, and swelling of eyes. Can injure eye tissue.

**Skin contact**
- Can cause skin irritation. Symptoms may include redness and burning of skin, and other skin damage. Prolonged or repeated contact may dry the skin. Symptoms may include redness, burning, and drying and cracking of skin, skin burns, and other skin damage.
Ingestion
Swallowing small amounts of this material during normal handling is not likely to cause harmful
effects. Swallowing large amounts may be harmful. This material can get into the lungs during
swallowing or vomiting. This results in lung inflammation and other lung injury.

Inhalation
Breathing of vapor or mist is possible. Breathing this material may be harmful. Symptoms are
not expected at air concentrations below the recommended exposure limits, if applicable (see Section
8.).

Aggravated Medical Condition
Preexisting disorders of the following organs (or organ systems) may be aggravated by exposure
to this material: Skin, Upper respiratory tract, lung (for example, asthma-like conditions), Kidney,
immune system, eye, urinary system, Exposure to this material may aggravate any preexisting condition
sensitive to a decrease in available oxygen, such as chronic lung disease, coronary artery disease or
anemias., Individuals with erythrocyte glucose-6-phosphate dehydrogenase deficiency are particularly
susceptible to hemolytic agents and rapidly develop hemolytic anemia from ingestion or inhalation of
this material (or a component).

Symptoms
Signs and symptoms of exposure to this material through breathing, swallowing, and/or passage
of the material through the skin may include:, sweating, Fever, stomach or intestinal upset (nausea,
vomiting, diarrhea), irritation (nose, throat, airways). Lung irritation, central nervous system depression
(dizziness, drowsiness, weakness, fatigue, nausea, headache, unconsciousness), Abdominal pain, Lack
of coordination, confusion, irregular heartbeat, blood abnormalities (breakage of red blood cells),
narcosis (dazed or sluggish feeling), kidney damage, lung damage, Convulsions, respiratory failure,
coma

Target Organs
This material (or a component) has been shown to lower activity of certain immune system cells
in experimental animals. The significance of this effect with respect to human health is uncertain.,
Exposure to this material (or a component) has been found to cause kidney damage in male rats. The
mechanism by which this toxicity occurs is specific to the male rat and the kidney effects are not
expected to occur in humans., Overexposure to this material (or its components) has been suggested as a
cause of the following effects in laboratory animals:, mild, reversible liver effects, mild, reversible
spleen effects, mild, reversible changes in blood cell counts, cataracts, anemia, nasal damage, thymus
damage, eye damage, kidney damage, central nervous system damage, Overexposure to this material (or
its components) has been suggested as a cause of the following effects in humans:, cataracts, eye
damage
Carcinogenicity

2-Ethylhexanol did not cause cancer in male mice or in male or female rats when given to the animals through a stomach tube. It caused a possible increase in liver tumors in female mice. 2-Ethylhexanol is not listed as a carcinogen by the International Agency for Research on Cancer (IARC), the National Toxicology Program (NTP), or the Occupational Safety and Health Administration (OSHA). In a National Toxicology Program (NTP) study, lifetime inhalation exposure to naphthalene resulted in increases in tumors of the nose in rats. In a previous NTP study, lifetime exposure to naphthalene caused lung tumors in female mice. Male mice with the same exposure did not develop tumors. The relevance of this finding to humans is uncertain. Naphthalene is listed as carcinogenic by IARC (International Agency for Research on Cancer) and the National Toxicology Program (NTP).

Reproductive hazard

This material (or a component) causes harm to the fetus. When given orally, 2-ethylhexanol caused an increase in incidence of birth defects at high doses, which were also harmful to the pregnant animal. 2-Ethylhexanol was not harmful to the fetus when administered by inhalation of vapors or when applied to the skin of the pregnant rats. Occupational exposure through skin contact or breathing of vapors is not expected to be harmful to the fetus.

Other information

Infants are more sensitive than adults to the toxic effects of naphthalene. Diapers or cloths stored with mothballs and used directly on infants have caused skin rashes and illness. Naphthalene vapors from clothing or blankets that had been stored in or near the infant's room have caused illness and death.

4. FIRST AID MEASURES
Eyes
If symptoms develop, immediately move individual away from exposure and into fresh air. Flush eyes gently with water for at least 15 minutes while holding eyelids apart; seek immediate medical attention.

Skin
Remove contaminated clothing. Flush exposed area with large amounts of water. If skin is damaged, seek immediate medical attention. If skin is not damaged and symptoms persist, seek medical attention. Launder clothing before reuse.

Ingestion
Seek medical attention. If individual is drowsy or unconscious, do not give anything by mouth; place individual on the left side with the head down. Contact a physician, medical facility, or poison control center for advice about whether to induce vomiting. If possible, do not leave individual unattended.

Inhalation
If symptoms develop, immediately move individual away from exposure and into fresh air. Seek immediate medical attention; keep person warm and quiet. If person is not breathing, begin artificial respiration. If breathing is difficult, administer oxygen.

Notes to physician
Hazards: Inhalation of high concentrations of this material, as could occur in enclosed spaces or during deliberate abuse, may be associated with cardiac arrhythmias. Sympathomimetic drugs may initiate cardiac arrhythmias in persons exposed to this material. Inhalation or ingestion of high levels of this material (or a component) may cause a hemolytic reaction. Complications of acute intravascular hemolysis include anemia, leukocytosis, fever, hemoglobinuria, jaundice, renal insufficiency, and sometimes disturbances in liver function. Fats, for example, baby oil on the skin or ingested oil, facilitate absorption of naphthalene. This material is an aspiration hazard. Potential danger from aspiration must be weighed against possible oral toxicity (See Section 2 - Swallowing) when deciding whether to induce vomiting.

Treatment: No information available.

5. FIREFIGHTING MEASURES

Suitable extinguishing media
Dry chemical, Carbon dioxide (CO2), Water spray
Hazardous combustion products
   Aldehydes, carbon dioxide and carbon monoxide, Hydrocarbons, nitrogen oxides (NOx),
   Sulphur oxides

Precautions for fire-fighting
   If product is heated above its flash point it will produce vapors sufficient to support
   combustion. Vapors are heavier than air and may travel along the ground and be ignited by heat, pilot
   lights, other flames and ignition sources at locations near the point of release. Never use welding or
   cutting torch on or near drum (even empty) because product (even just residue) can ignite
   explosively. Wear full firefighting turn-out gear (full Bunker gear), and respiratory protection (SCBA).
   Use water spray to cool fire exposed containers and structures until fire is out if it can be done with
   minimal risk. Avoid spreading burning material with water used for cooling purposes.

NFPA Flammable and Combustible Liquids Classification
   Combustible Liquid Class IIIA

6. ACCIDENTAL RELEASE MEASURES

Personal precautions
   For personal protection see section 8. Persons not wearing protective equipment should be
   excluded from area of spill until clean-up has been completed. Ensure adequate ventilation. Eliminate all
   ignition sources (flares, flames including pilot lights, electrical sparks). Pay attention to the spreading of
   gases especially at ground level (heavier than air) and to the direction of the wind.

Environmental precautions
   Prevent spreading over a wide area (e.g. by containment or oil barriers). Do not let product enter
   drains. Do not flush into surface water or sanitary sewer system. Local authorities should be advised if
   significant spillages cannot be contained.

Methods for cleaning up
   Contain spillage, and then collect with non-combustible absorbent material, (e.g. sand, earth,
   diatomaceous earth, vermiculite) and place in container for disposal according to local / national
   regulations (see section 13).

Other information
   Comply with all applicable federal, state, and local regulations. Suppress (knock down)
   gases/vapours/mists with a water spray jet.
7. HANDLING AND STORAGE

Handling
Containers of this material may be hazardous when emptied. Since emptied containers retain product residues (vapor, liquid, and/or solid), all hazard precautions given in the data sheet must be observed. Static ignition hazard can result from handling and use. Electrically bond and ground all containers, personnel and equipment before transfer or use of material. Special precautions may be necessary to dissipate static electricity for non-conductive containers. Use proper bonding and grounding during product transfer as described in National Fire Protection Association document NFPA 77.

Storage
Store in a cool, dry, ventilated area.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Exposure Guidelines

<table>
<thead>
<tr>
<th>DISTILLATES (PETROLEUM), HYDROTREATED LIGHT</th>
<th>64742-47-8</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACGIH time weighted average</td>
<td>200 mg/m³</td>
</tr>
<tr>
<td>NIOSH Recommended exposure limit (REL):</td>
<td>100 mg/m³</td>
</tr>
</tbody>
</table>

General advice
These recommendations provide general guidance for handling this product. Personal protective equipment should be selected for individual applications and should consider factors which affect exposure potential, such as handling practices, chemical concentrations and ventilation. It is ultimately the responsibility of the employer to follow regulatory guidelines established by local authorities.

Exposure controls
Provide sufficient mechanical (general and/or local exhaust) ventilation to maintain exposure below exposure guidelines (if applicable) or below levels that cause known, suspected or apparent adverse effects.

Eye protection
Wear chemical splash goggles when there is the potential for exposure of the eyes to liquid, vapor or mist. Maintain eye wash station near work area.

Skin and body protection
Wear resistant gloves such as:
Neoprene
Wear normal work clothing including long pants, long-sleeved shirts and foot covering to prevent direct contact of the product with the skin. Launder clothing before reuse. If skin irritation develops, contact your facility health and safety professional or your local safety equipment supplier to determine the proper personal protective equipment for your use.

Discard gloves that show tears, pinholes, or signs of wear.

Respiratory protection
A NIOSH-approved air-purifying respirator with an appropriate cartridge and/or filter may be permissible under certain circumstances where airborne concentrations are expected to exceed exposure limits (if applicable) or if overexposure has otherwise been determined. Protection provided by air-purifying respirators is limited. Use a positive pressure, air-supplied respirator if there is any potential for uncontrolled release, exposure levels are not known or any other circumstances where an air-purifying respirator may not provide adequate protection.

10. STABILITY AND REACTIVITY

Stability
Stable.

Conditions to avoid
excessive heat
Incompatible products
Acids, alkalis, aluminum, Lead, Strong oxidizing agents, strong reducing agents

Hazardous decomposition products
Aldehydes, carbon dioxide and carbon monoxide, Hydrocarbons

Hazardous reactions
Product will not undergo hazardous polymerization.

Target Organ Systemic Toxicant - Repeated exposure:
Target Organs: This material (or a component) has been shown to lower activity of certain immune system cells in experimental animals. The significance of this effect with respect to human health is uncertain. Exposure to
this material (or a component) has been found to cause kidney damage in male rats. The mechanism by which this toxicity occurs is specific to the male rat and the kidney effects are not expected to occur in humans.

Overexposure to this material (or its components) has been suggested as a cause of the following effects in laboratory animals: mild, reversible liver effects, mild, reversible spleen effects, mild, reversible changes in blood cell counts, cataracts, anemia, nasal damage, thymus damage, eye damage, kidney damage, central nervous system damage.

Overexposure to this material (or its components) has been suggested as a cause of the following effects in humans: cataracts, eye damage.

Aspiration toxicity: The substance or mixture is known to cause human aspiration toxicity hazards or has to be regarded as if it causes a human aspiration toxicity hazard.

**Components:**

**ALIPHATIC HYDROCARBONS:**

Acute oral toxicity: LD 50 Rat: > 5,000 mg/kg

Acute inhalation toxicity: LC 50 Rat: > 5500 ppm

Exposure time: 4 h

Acute dermal toxicity: LD 50 Rabbit: > 3,000 mg/kg

**SOLVENT NAPHTHA (PETROLEUM), HEAVY AROMATIC:**

Acute oral toxicity: LD 50 Rat: 3,000 mg/kg

Acute inhalation toxicity: LC 50 Rat: > 3,800 mg/m3

Exposure time: 4 h

Acute dermal toxicity: LD 50 Rabbit: > 3,000 mg/kg
12. ECOLOGICAL INFORMATION

Ecotoxicity

**Product:**
no data available

**Components:**

**ETHYLHEXANOL-2:**
Toxicity to fish : LC 50 (Fathead minnow (Pimephales promelas)): 28.2
mg/l
Exposure time: 96 h

Toxicity to daphnia and other aquatic invertebrates : EC 50 (Water flea (Daphnia magna)): 39 mg/l
Exposure time: 48 h

Toxicity to algae : (Desmodesmus subspicatus (green algae)): 11.5 mg/l
Exposure time: 72 h
Test Method: static test

NAPHTHALENE:
Toxicity to fish : LC 50 (Rainbow trout, donaldson trout (Oncorhynchus mykiss)): 0.91 - 2.82 mg/l
Exposure time: 96 h
Test Method: static test

Toxicity to daphnia and other aquatic invertebrates : EC 50 (Water flea (Daphnia magna)): 1.09 - 3.4 mg/l
Exposure time: 48 h
Test Method: static test

Persistence and degradability

Product:
no data available

Components:

ETHYLHEXANOL-2:
Biodegradability : Biodegradation: 68 %
Exposure time: 17 d
Method: Modified Sturm Test
Readily biodegradable

Bioaccumulative potential

Product:
Components:

NAPHTHALENE:
Bioaccumulation: Species: Rainbow trout, donaldson trout (Oncorhynchus mykiss)
Exposure time: 16 d
Concentration: 0.023 mg/l
Bioconcentration factor (BCF): 25
Method: Flow through

Partition coefficient: n-octanol/water: log Pow: 3.30

Mobility in soil

Product:
no data available

Components:

NAPHTHALENE:
Surface tension: 31.8 mN/m

13. DISPOSAL CONSIDERATIONS

Waste disposal methods
Dispose of in accordance with all applicable local, state and federal regulations.
